### **REMINDER BRC SPORTING REGULATION Art. 22**

Motorsport UK British Rally Championship has engaged VP Racing Fuels as the official fuel supplier for the championship. This brings many benefits to the series as well as the competitor:

- Safe distribution of fuel from a central source at all events.
- No fuel is transported to events by individuals.
- Competitors only pay for the fuel that they use.
- A level playing field across the classes.

VP Racing Fuels will have two fuels available to competitors at all rounds. These will be distributed by Old Hall Performance, as their UK distribution provider. The fuels will be:

- R5.1 for recognised R5 / Rally2 cars.
- RX102 Race Fuel for all other competitors.

The RX102 race fuel is a versatile unleaded race fuel that can be run in any vehicle, without a specialised electronic map, and is also suitable for Historic cars. It even powers two-stroke engines, not that that is something that we have in the BRC.

No waivers will be issued from the championship for crews to use an alternative fuel or fuel supplier. All competition cars will perform using either VP Fuels R5.1 or RX102 Race Fuel
