REMINDER: BRC SPORTING REGULATION Art. 22

For a second successive year, VP Racing Fuels will be the official fuel supplier for the Motorsport UK British Rally Championship. This brings many benefits to the series as well as the competitor:

- Safe distribution of fuel from a central source at all events.
- No fuel is transported to events by individuals.
- Competitors only pay for the fuel that they use.
- A level playing field across the classes.

VP Racing Fuels will be provided by their UK distribution partner, Old Hall Performance who will provide pumped fuel on event.

The fuel will be:

- VP R5.1 - FIA-Certified competition fuel

VP R5.1 is 102RON ethanol free, unleaded race fuel that meets FIA appendix J regulations. It was specifically designed in conjunction with M-Sport to work in the latest generation of rally cars. Maps are available for the majority of current generations cars, please contact the manufacturer for more information.

For previous generation, classic and historic cars currently running a pump fuel they can change to R5.1 without the need for a remap.

No waivers will be issued from the championship for crews to use an alternative fuel or fuel supplier. All competition cars will perform using VP Fuels R5.1.
